Toothbrush Those Invention concerns a toothbrush from rubber, itself the light pure-hold and/or. reini towards leaves and therefore is more hygienic as the known Bristle brush.

There already is various toothbrushes out Rubber become known, of them rubs divides out Squares exist, whose sides the sides of the bottom of the brush parallel run.

With other known toothbrushes from rubber those exist Rubbing hurry out fünfkanti towards chisel or wedge shaped points/teeth, or the friction surface corrugated is and/or. besteht from small three-sharp-edged projections in Pyra avoiding form.

Also Rubbing hurry out tooth-like, fünfkanti towards rubber sheets in Chisel or Wedge form known are with such toothbrushes.

Opposite these apparatuses exist with that Invention those those Bristle bundle it setting Rubbing hurry from low, vierkan tigen Gummisäulchen in Rhombus form, those with the bottom of the brush out a piece exist.

Those Rhombus form the obtained Säulchen by over-crossing Oblique cuts in Rubber brush body.

The drawing points to that Fig. i and A of plan views, at the same time in addition, those Rub-flat two brushes in ski those dimensions, and in Abb.3 a perspective view of the brush. So that the Säulchen have sufficient movement liberty, around extensive work too kön nen, as well as to the easier keeping clean of the brush, the width of the oblique cuts is not to narrow to dimensioned.

Prepared one out a flexible, at the same time in addition, sufficient rigid material practice low, relatively strong Rubber säulchen on those Tooth surfaces a scraping and a polishing and on the gums the blood circulation an exciting massing effect out.

In addition, for those thorough purification between the teeth located gaps is the brush because of that Rhombus form of the Säulchen and their position to the bottom of the same particularly suitable.

The diagonals of the rhombuses stand quite angular to the sides of the brush soil. Since through are those Rubbing hurry into a position ge broke, from that it with their pointedly angular Edges easily into the gaps to penetrate can.

PAFiENTANSPRUCH: Toothbrush, with at location that Bristle bundle of Gummisäulchen in four Kant form arranged are, thus ge mark that those Gummisäulchen by over-crossing oblique cuts in Rubber brush body Rhombus form it hold.
